Large communication surface

Simple and intuitive to use, the Neo is a bag dispenser with a large communication space of 294 x 526 mm, slogan screen printed in POINT SACHET or with a multitude of multi-coloured visuals.

Cost-effective distribution of bags

Of all the displays and bag holders on the market, the Neo bag dispenser is the only one that actually dispenses the bags one by one. This feature provides significant savings for communities, but also for the environment.

A user who wishes to pick up a bag must move the balance to the right or left to reveal the bag through one of the side openings. The bag is then easy for the user to pick up and pull the bag out of the opening so that it separates from the stump. The side removal allows for a hygienic grip of the bag for all users and is easy even in winter when wearing gloves. The Neo system is described in Patent N° EP2586326 A1 filed by APRICO on 25/10/2012.

The first step to take for the environment is to reduce waste.

Local authorities equipped with the APRICO Neo dispenser have seen a reduction of between 30% and 50% in their bag consumption after exchanging their old equipment.

Material & safety

Front panel made of 2 mm thick aluminium painted with powder coated polyester, the aluminium is 100% recyclable without losing its physical and chemical qualities. Today, almost 40% of the aluminium consumed in France is recycled. The Magnelis stainless steel frame provides high rigidity and up to 10 times the corrosion resistance of galvanised steel. Signage by silk-screen printing or retro-reflective graphic stickers, covered with an anti-graffiti protection. To ensure that the communication is long-lasting, all the inks used are UV-resistant.

Special flat key lock to prevent pilfering of dispensers.

Supply and ease of use

Neo facilitates the work of the staff in charge of its supply by a horizontally open door and a self-locking front lock. Several sizes of bags are accepted. All types of fixings are possible (on masts of all sections, wall-mounted, etc.).
